

### Polygon Shapes Assignment

Using what you now know about the Photoshop Shape Tools, create the symbols as shown below. When you have completed those, create 4 more NEW circular symbols that combine at least three different shapes. Stay with solid Black and White for now.

When you are finished with each, SAVE the Photoshop document (.psd) for your own future use. Then EXPORT as SVG. Place the SVG files in the images folder of the sybmols\_webpage folder provided. Add the svg file to the webpage. Play around with the width and height of each symbol to see how the resizing keeps the symbols crisp and high quality.
