## Using the Crop Tool

Photoshop provides superior tools for cropping and rotating digital images. When you select the First - let's examine the menu options when you have the crop tool selected:

## Cropping and Image

When you open an image in Photoshop, the crop tool is automatically selected. Click and drag the mouse to adjust the area you wish to crop. At the corner is an indicator as to the pixel dimensions of the crop. If you move your mouse outside one corner, you will get a double curved arrow to allow rotation. To apply the crop simply double-click inside the crop area with your mouse, or click on the Apply Crop check mark in the menu bar.

NOTE: If you prefer working in pixels, but inch dimensions display, go to Photoshop>Preferences>Units & Rulers. Change the Ruler to pixels.
